Hospital Bedside Medical Administration

Even before Covid-19, medication errors have been identified as one of the largest safety issues in healthcare. Hospital bedside medical administration is even more important today. By electronically matching a drug to patient information through barcoded data prior to administration, and then adding the ability to print medication or pathology request label - clinical productivity, patient safety and quality of care are improved.

Features / Benefits

- #1 disinfectant ready scanner plastics on the market
- Unmatched Infectious disease control with inductive charging, no exposed metal and the only IP65 rating in the market
- Saving valuable time for staff and minimizing the risk of error
- Multiple form factors and mounting options giving hospitals the flexibility to choose the product/setup that matches their workflows
- Reads all of the challenging barcodes found in the healthcare environment including wristbands, IV Bags, Blood collection, small vials, etc.
- Pair with a Citizen printer to handle a wide variety of hospital media, including: pharmacy, radiology, phlebotomy and standard and pediatric wristbands
- Compact, robust design with ultra-fast print and easy set-up and loading for fast media changes
