Simplified Online Ordering Platform

Developed with the small business owner in mind, SOOP (Simplified Online Ordering Platform) is the first affordable, textbased solution that enables restaurants to simplify takeout, curbside and delivery orders while streamlining their order management processes! Here's how SOOP Works:

1. Customers simply tell SOOP where they want to order from, what they want and how they want to receive it via their mobile device

2. Restaurants receive the orders on their Android-based countertop touch display system

3. Once the order is accepted and a price is given, the customer will receive a message requesting payment – restaurants receive payment up front

SOOP is perfect for restaurants who are transitioning to a takeout only business model in response to the COVID-19 Pandemic. And to offer some relief for impacted businesses during this time, SOOP is offering a 50% discount on their subscription fee for the first 12 months!
