

COVID-19 Solutions

CONTACTLESS SIGNATURES

Honeywell

PRODUCTS INCLUDED:

- Honeywell CT40
- doForms Software

Collect Signatures From A Distance

Contactless signature is a unique feature that allows customers to sign forms without having to exchange paper or touch a workers tablet or smartphone. This feature is particularly important during the COVID-19 outbreak, where people are recommended to socially distance and/or remain at least 6 feet away from others!

How it Works:

- 1.** Businesses that have converted their forms to doForms can have their mobile workers fill out the form.
- 2.** Then, they ask the customer or patient for an email address, enter it into the form and then forward the form directly to the customer with one click.
- 3.** The customer opens the email on their smartphone, tablet or browser, and clicks on the form to add information, pay by credit card* or sign the document
- 4.** When the customer completes the form, they just click one button and the executed document is returned to the mobile worker.
- 5.** The form then automatically sends an email receipt to the customer.
- 6.** Everything can be done from 6 feet apart (or more!), with no exchange of paper or infected mobile devices.
